## "Quarterly Progress Report" Jan.-Mar., 1977

During the period of Jan.1-March 31, 1977, investigators continued their research.

Some of the co-investigators found the necessity of acquiring a few more CCT's to investigate the environmental change pattern and request will be made to EROS Data Center accordingly.

Due to shortage of good data of the coastal areas, same data are used by several investigators for the study of sea surface pollution and oceanography. It seems a certain preliminary coordination is necessary before writing the final report.

At a meeting of our co-investigators, the discussion on the format of final report was made leading to a conclusion that it would be advisable to set up a certain format so that the new findings and usefulness of Landsat II data can be clarified and stressed.

All the co-investigators are now making effort on final report and no special written report was sent to the PI except one by Dr. K. Tsuchiya & Prof. H. Ochiai which will be sent under separate cover shortly.
